LinkedIn: <https://www.linkedin.com/in/akshaypatwari/> | Portfolio: <https://akshaypatwari.me/>

Visa Status: Requires Singapore Employment Pass Sponsorship | Open to employer-sponsored relocation

Objective

Java enterprise engineer with **8+ years** of experience designing, developing, and maintaining **scalable Java microservices and event-driven applications** for banking, insurance, and AI platform domains. Deep proficiency in **Java 8-21, Spring Boot 3, REST APIs, and Apache Kafka** for high-throughput, business-critical systems, with hands-on CI/CD practice using **Jenkins, Maven, and Git** following Agile, TDD, and production-support disciplines. Brings direct **banking and financial services domain experience** from Oracle Financial Services (Flexcube core banking platform) and Chubb International (insurance policy builder) — precisely the enterprise financial context this role demands. Led a team of six engineers as technical lead, owning architecture, code quality, and delivery; eager to bring that experience to a high-impact engineering team at a leading global investment bank in Singapore.

Skills

- **Programming Languages:** Java 8-21, Angular 17
- **Frameworks:** Microservices, Spring Boot 3, Spring JPA
- **Tools & Platforms:** Git, Jira, Keycloak, NiFi, Docker, Nexus, RabbitMQ/Kafka, Redis, Agile, CI/CD (Jenkins)
- **Databases:** MySQL, Oracle, MongoDB
- **Interpersonal:** Leadership, Problem Solving, Decision Making, Communication across geographies
- **Others:** GenAI/LLM (LangChain, LangGraph)

Professional Experience

Samsung Electro-Mechanics — Software Engineer (CL3) / Staff Engineer

February 2022 – Present

PADO Platform — Enterprise Java Microservices and Event-Driven AI Infrastructure

- Designed and implemented **event-driven microservices using Apache Kafka** — topic design, consumer group management, offset handling, and reliable asynchronous processing patterns — enabling high-throughput, decoupled pipelines at enterprise scale, directly comparable to Kafka and IBM MQ integration requirements in banking systems.
- Developed and maintained **production-grade Java 21 / Spring Boot 3 microservices** with REST APIs and Web Services following rigorous OOP, multithreading, and performance optimisation standards; enforced **TDD** via unit-test coverage and structured **code reviews** across the team.
- Enforced full **CI/CD pipeline discipline (Jenkins, Maven, Git, Docker)** — build, test, and deploy automation across environments — with structured release management and production support processes aligned to enterprise engineering standards.
- Built the platform's **identity and access management layer with Keycloak (SSO, OAuth2/OIDC)**, providing secure API integration across Kubeflow, Grafana, Jupyter, and Docker — meeting banking-grade security and access governance requirements.
- Leveraged **Kubernetes** orchestration to manage containerised applications at scale — ensuring high availability, resource utilisation, and resilience across multi-cluster environments; facilitated seamless horizontal scaling and zero-downtime deployments.
- Integrated an **in-house LLM** into developer and platform workflows, exploring modern AI/ML capabilities within a production engineering environment.
- **Technical team leader for six engineers** — owned feature architecture, design and code reviews, cross-geography stakeholder communication, and end-to-end delivery accountability.

Oracle Financial Services Software Ltd — Technical Staff Consultant

August 2021 – February 2022

- Developer on the **Flexcube core banking platform** — module-wise code analysis and authoring **PL/SQL** packages, functions, and procedures for financial transaction processing on **Oracle RDBMS** in a large-scale

banking environment.

- Delivered production data-layer fixes using PL/SQL cursors and optimised SQL queries, supporting Cash Management and banking operations modules.

Chubb International (Cognizant) — Programmer Analyst

February 2019 – August 2021

- Developer on the **Masterpiece** insurance policy-builder application; delivered client-required changes across the full SDLC with technical depth and clean execution.
- Designed and implemented an efficient walk-back handling feature, improving business process reliability and suggesting further system improvements.

Agrainz Solutions — Trainee Software Engineer

February 2018 – August 2018

- Intern on two products: Agrainz and Zedua.

Education

MVJ College of Engineering — Information Science and Engineering, 2017

Achievements

- **Leading a team of 6 Java developers (January 2024 – Present):** Java technical lead and associate team lead within the organisation, ensuring project milestones were met while maintaining high quality standards.
- **CSR event — training on latest technologies:** taught higher-secondary students about the latest technologies in the software industry.

Awards

- **Best Trainer in Java (February 2023 – December 2024):** recognised for conducting technical trainings within technical teams in the organisation.
- **"Doing the Right Thing, the Right Way" (December 2020):** awarded at Cognizant for constant client interaction and implementing necessary changes and suggestions.
