OBJECTIVE

Java engineer with **8+ years** of hands-on experience delivering **production-grade Java customizations, event-driven triggers, and business logic automation** across financial services, banking, and AI platforms. Proficient in **Java 8–21, Spring Boot 3, PL/SQL trigger and procedure development, lifecycle validation logic, helper-class design, and debugging complex production issues** — including bulk-data failures. Brings direct domain experience in **regulated industries (insurance — Chubb, core banking — Oracle Flexcube)**, a strong track record of independently converting business requirements into reliable technical solutions, and hands-on experience with **AI and GenAI tools**. Eager to apply this breadth to Java customization work in a fintech GRC environment.

SKILLS

- **Programming Languages:** Java 8-21, Angular 17
 - **Frameworks:** Microservices, Spring Boot 3, Spring JPA
 - **Tools & Platforms:** Git, Jira, Keycloak, NiFi, Docker, Nexus, RabbitMQ/Kafka, Redis, Agile, CI/CD (Jenkins)
 - **Databases:** MySQL, Oracle, MongoDB
 - **Interpersonal:** Leadership, Problem Solving, Decision Making, Communication across geographies
 - **Others:** Agentic AI (multi-agent orchestration using pyqllt, in-house LLM agent development)
-

PROFESSIONAL EXPERIENCE

Samsung Electro-Mechanics — Software Engineer (CL3) / Staff Engineer

02/2022 – Present

PADO Platform — Java microservices for AI model lifecycle management

- Designed and delivered **event-driven Java automation** using **Kafka/RabbitMQ** consumers to trigger model lifecycle transitions (training → deployment → monitoring → redeployment) — directly analogous to trigger-based status lifecycle automation in GRC platforms.
- Wrote and maintained **Java helper utilities and service classes** to encapsulate business rules, retrieve related child records, and calculate derived metrics — keeping core business logic cleanly separated and testable.
- **Debugged and fixed complex production issues** including failures in bulk-data scenarios: root-cause analysis via logs, reproducing edge cases, applying targeted fixes, and coordinating with QA for UAT sign-off before release.
- Leveraged **GenAI/LLM tooling** (in-house LLM hosting on the platform, LangChain/LangGraph integrations) for AI-assisted development and automation — aligned with the JD requirement for AI tools proficiency.
- As **technical team leader for six engineers** — drove architecture decisions, set coding standards, performed code reviews, and communicated across technical and non-technical stakeholders to keep delivery aligned with business priorities.
- Applied **JUnit / Mockito** for unit testing and maintained rigorous code quality through reviews and SonarQube analysis.

Oracle Financial Services Software Ltd — Technical Staff Consultant

08/2021 – 02/2022

- Developer on the **Flexcube core banking platform** — built **PL/SQL packages, functions, triggers, and procedures** for module-wise customization: a direct parallel to Java trigger and helper development in GRC/risk platforms.
- **Delivered production data fixes** using PL/SQL cursors and optimized SQL queries, including **debugging and resolving bulk-data update failures** in a high-stakes banking production environment.

Chubb International (Cognizant) — Programmer Analyst

02/2019 – 08/2021

- Developer on the **Masterpiece policy-builder application** (enterprise insurance — a regulated financial services domain); delivered client-required changes with clean execution.
- Independently designed and built an **efficient walk-back handling feature** — implementing **lifecycle status transition validation logic** that enforced correct state progressions and prevented invalid transitions, directly matching the JD's trigger/validation requirements.
- Proposed future architectural improvements and maintained ongoing client interaction, implementing suggestions and translating business needs into technical solutions.

Agrainz Solutions — Trainee Software Engineer

02/2018 – 08/2018

- Intern on two products: Agrainz and Zedua.

EDUCATION

MVJ College of Engineering — Information Science and Engineering, 2017

ACHIEVEMENTS

- **Leading a team of 6 Java developers (01/2024 – Present):** Java technical lead and associate team lead within the organization, ensuring project milestones were met while maintaining high quality standards.
 - **CSR event — training on latest technologies:** taught higher-secondary students about the latest technologies in the software industry.
-

AWARDS

- **Best Trainer in Java (02/2023 – 12/2024):** recognized for conducting technical trainings within technical teams in the organization.
- **"Doing the Right Thing, the Right Way" (12/2020):** awarded at Cognizant for constant client interaction and implementing necessary changes and suggestions.
