Objective

Java platform engineer with **8+ years** of expertise building and operating **multi-tenant cloud platform services** — microservices, authentication and authorization systems, and containerized SaaS/PaaS infrastructure — across enterprise AI platform, banking, and P&C; insurance domains. Deep hands-on proficiency in **Java 8-21, Spring Boot 3, Kubernetes, Docker, and CI/CD** with direct experience designing **OAuth2/OIDC and SSO authentication layers using Keycloak**, delivering Kubernetes-orchestrated multi-cluster deployments, and enforcing **TDD and automated testing disciplines** in production engineering teams. Brings rare **P&C; insurance domain experience** from Chubb International's Masterpiece policy-builder platform — exactly the industry Guidewire serves — and technical team leadership of six engineers; eager to contribute that depth to Guidewire Cloud Platform engineering and help insurers innovate at cloud scale.

Skills

- **Programming Languages:** Java 8-21, Angular 17
- **Frameworks:** Microservices, Spring Boot 3, Spring JPA
- **Tools & Platforms:** Git, SVN, Jira, Keycloak, NiFi, Docker, Nexus, RabbitMQ/Kafka, Redis, Agile, CI/CD (Jenkins)
- **Databases:** MySQL, Oracle, MongoDB
- **Interpersonal:** Leadership, Problem Solving, Decision Making, Communication across geographies
- **Others:** GenAI/LLM (LangChain, LangGraph)

Professional Experience

Samsung Electro-Mechanics — Software Engineer (CL3) / Staff Engineer

February 2022 – Present

PADO Platform — Multi-Tenant Cloud Platform Services and Java Engineering

- Designed and delivered **Authentication and Authorization platform services using Keycloak (SSO, OAuth2/OIDC)** — integrating securely across Kubeflow, Grafana, Jupyter notebooks, and Docker for all token and session management — directly mapping to Guidewire Cloud Platform's auth and developer experience service requirements.
- Leveraged **Kubernetes orchestration** to architect and operate **multi-tenant containerized platform** deployment — build in one cluster, deploy across many — ensuring high availability, scalability, and resource efficiency for enterprise-scale SaaS workloads.
- Developed and maintained **production-grade Java 21 / Spring Boot 3 microservices** with REST APIs following rigorous OOP and SOLID principles; enforced **TDD and test-first culture** through unit-test coverage mandates and structured code reviews across the team.
- Drove **end-to-end CI/CD pipeline automation (Jenkins, Maven, Git, Docker)** — build, test, and deploy across environments — enabling continuous delivery of containerized applications to cloud infrastructure with structured release management.
- Integrated **Grafana** for platform observability — metrics dashboards, monitoring, and alerting — contributing to platform reliability and operational visibility across multi-cluster deployments aligned to logs, metrics, and traces observability goals.
- **Technical team leader for six engineers** — owned feature architecture and design reviews, established engineering best practices, drove cross-functional stakeholder communication, and maintained high-quality delivery standards in an Agile, pairing-friendly environment.
- Integrated an **in-house LLM** into platform developer workflows, demonstrating a culture of curiosity and practical AI adoption to drive engineering productivity and innovation.

Oracle Financial Services Software Ltd — Technical Staff Consultant

August 2021 – February 2022

- Developer on the **Flexcube core banking platform** — module-wise code analysis and building PL/SQL packages, functions, and procedures for financial transaction processing on Oracle RDBMS.
- Delivered production data-layer fixes using PL/SQL cursors and optimised SQL queries in a large-scale enterprise SaaS environment.

Chubb International (Cognizant) — Programmer Analyst

February 2019 – August 2021

- Developer on the **Masterpiece Policy Builder** — a core P&C; insurance application delivering policy lifecycle management for Chubb's enterprise clients; directly comparable to the insurance software domain Guidewire serves across property and casualty carriers worldwide.
- Owned client-required feature delivery across the full SDLC — requirements, development, testing, and release — with technical depth, clean execution, and direct client stakeholder communication in a fast-paced Agile environment.
- Designed and implemented an efficient walk-back handling feature, proactively suggesting system improvements beyond the original scope — recognised with the "Doing the Right Thing, the Right Way" award for consistent client interaction and delivery quality.

Agrainz Solutions — Trainee Software Engineer

February 2018 – August 2018

- Intern on two products: Agrainz and Zedua.

Education

MVJ College of Engineering — Information Science and Engineering, 2017

Achievements

- **Leading a team of 6 Java developers (January 2024 – Present):** Java technical lead and associate team lead within the organisation, ensuring project milestones were met while maintaining high quality standards.
- **CSR event — training on latest technologies:** taught higher-secondary students about the latest technologies in the software industry.

Awards

- **Best Trainer in Java (February 2023 – December 2024):** recognised for conducting technical trainings within technical teams in the organisation.
- **"Doing the Right Thing, the Right Way" (December 2020):** awarded at Cognizant for constant client interaction and implementing necessary changes and suggestions.
