

Akshay Patwari

SOFTWARE ENGINEER

Bengaluru, India | +91 91642 91810 | akshaypatwariap@gmail.com

LinkedIn: <https://www.linkedin.com/in/akshaypatwari/> | Portfolio: <https://akshaypatwari.me/>

Objective

Software engineer with **8+ years** of hands-on Core Java expertise in designing, developing, and delivering **high-performance, system-level applications** across enterprise AI platform, core banking, and insurance domains. Deep proficiency in **Object-Oriented Programming, SOLID design principles, modular architecture, and multithreaded / concurrent programming** — with a consistent record of owning critical components end-to-end: requirements, architecture, implementation, test, and production release. Proven ability to **lead design reviews, mentor teams of engineers, drive root cause analysis on complex production issues**, and deliver quality fixes under pressure while maintaining long-term code maintainability. Brings direct experience as **technical team lead for six engineers** — owning architectural decisions, code quality standards, and cross-functional stakeholder alignment — and eager to apply that depth to system-level software engineering in a high-impact semiconductor equipment environment.

Skills

- **Programming Languages:** Java 8-21, Angular 17
- **Frameworks:** Microservices, Spring Boot 3, Spring JPA
- **Tools & Platforms:** Git, SVN, Jira, Keycloak, NiFi, Docker, Nexus, RabbitMQ/Kafka, Redis, Agile, CI/CD (Jenkins)
- **Databases:** MySQL, Oracle, MongoDB
- **Interpersonal:** Leadership, Problem Solving, Decision Making, Communication across geographies
- **Others:** GenAI/LLM (LangChain, LangGraph)

Professional Experience

Samsung Electro-Mechanics — Software Engineer (CL3) / Staff Engineer

February 2022 – Present

PADO Platform — System-Level Java Application Engineering and Technical Leadership

- Architected and delivered **production-grade Core Java 21 / Spring Boot 3 system components** with rigorous application of **OOP principles, SOLID design, and proven design patterns** — owning the full SDLC from requirements and architecture through implementation, unit-test validation, release, and post-release production support.
- Led **multithreaded and concurrent programming** across high-throughput, event-driven pipelines using Apache Kafka — designing consumer group topology, offset management, and thread-safe asynchronous processing patterns to ensure performance optimisation and system resilience at enterprise scale.
- Drove **architecture decisions and design reviews** as technical team leader for six engineers — defining component boundaries, enforcing modular architecture and code quality standards, conducting structured code reviews, and ensuring long-term maintainability and knowledge continuity across the platform.
- **Mentored junior engineers** and led team capability building: conducted technical training sessions, authored design documentation, and established engineering best practices for the team — directly contributing to the organisation's "Best Trainer in Java" recognition.
- Diagnosed and resolved **complex production issues** across multi-cluster Kubernetes environments — performing root cause analysis, delivering targeted fixes under time pressure, and supporting field-driven defect resolution while maintaining system availability and high code quality standards.
- Designed and implemented the platform's **identity and access management layer with Keycloak (SSO, OAuth2/OIDC)** — integrating securely with Kubeflow, Grafana, Jupyter, and Docker, demonstrating ownership of critical cross-cutting security components through full end-to-end delivery.
- Managed **CI/CD pipeline discipline (Jenkins, Maven, Git, Docker)** — build, test, and deploy automation across environments with structured release management aligned to Agile and project planning and estimation practices.

Oracle Financial Services Software Ltd — Technical Staff Consultant

August 2021 – February 2022

- Developer on the **Flexcube core banking platform** — module-wise code analysis, root cause investigation, and authoring PL/SQL packages, functions, and procedures for financial transaction processing on Oracle RDBMS.
- Delivered production data-layer fixes using PL/SQL cursors and optimised SQL queries, demonstrating ability to debug and resolve complex field issues in large-scale production systems.

Chubb International (Cognizant) — Programmer Analyst

February 2019 – August 2021

- Developer on the **Masterpiece** insurance policy-builder application; owned client-required feature changes across the full SDLC with technical depth, clean execution, and direct client stakeholder communication.
- Designed and implemented an efficient walk-back handling feature, improving business process reliability and proactively suggesting further system improvements — recognised with the "Doing the Right Thing, the Right Way" award for consistent client interaction and quality delivery.

Agrainz Solutions — Trainee Software Engineer

February 2018 – August 2018

- Intern on two products: Agrainz and Zedua.

Education

MVJ College of Engineering — Information Science and Engineering, 2017

Achievements

- **Leading a team of 6 Java developers (January 2024 – Present):** Java technical lead and associate team lead within the organisation, ensuring project milestones were met while maintaining high quality standards.
- **CSR event — training on latest technologies:** taught higher-secondary students about the latest technologies in the software industry.

Awards

- **Best Trainer in Java (February 2023 – December 2024):** recognised for conducting technical trainings within technical teams in the organisation.
- **"Doing the Right Thing, the Right Way" (December 2020):** awarded at Cognizant for constant client interaction and implementing necessary changes and suggestions.
